

Screws for acrylic sheets

Head color: White and black

Bit: Square #2

**Application: Acrylic sheets,
wooden substrates**

Material: Iron (SWCH18A)

Surface treatment on request :

Applicable thickness of sheet : 1mm to 3mm

For typical acrylic sheets, pre-drilling is not necessary. However, in some cases, pre-drilling may be required. The use on acrylic sheets larger than 500mm square poses a risk of breakage due to the expansion and contraction of the acrylic.

Please apply no load during installation to prevent damage caused by the acrylic sheet's expansion.

(To ensure the removal of acrylic shavings adequately.)

Ensure that the insertion points are at least 10mm away from the edges of the acrylic sheet.
